Ex. No. 1	Design a Website Using HTML5
Date of Exercise	20.07.2026
GitHub Host Link	https://praneettigga.github.io/web-tech-lab/

Aim

To design and develop a simple yet structured HTML5 website for an Interior Design Studio ("Zen Spaces") using essential semantic tags and formatting features such as headings, paragraphs, images, tables, lists, different types of hyperlinks, comments, sections, and background and text colors applied through internal CSS.

Description

HTML5 document structure: The page begins with the <!DOCTYPE html> declaration, followed by the <html lang="en"> root element, a <head> containing <meta charset="UTF-8"> and <title>, and a <body> containing all visible content.

Headings and paragraphs: <h1> to <h4> define the content hierarchy, and <p> holds blocks of text.

Hyperlinks: The anchor tag <a> is used for an external link (target="_blank" with rel="noopener noreferrer"), internal/bookmark links to sections using id values (href="#projects"), links to other pages (pages/gallery.html), an email link (mailto:), a phone link (tel:) and a clickable image link (an <img> nested inside <a>).

Images: <img> embeds pictures using the src, alt and width attributes; alt text provides an accessible description.

Tables: <table>, <tr>, <th> and <td> arrange project details (image, name, room type, style) in rows and columns.

Lists: A description list (<dl>, <dt>, <dd>) describes the services; an ordered nested list (<ol> inside <li>) shows the design process; an unordered nested list (<ul> inside <li>) shows rooms and styles.

Comments and : HTML comments (<!-- ... -->) label each module, and elements with class and id attributes divide the page into navigation, hero, welcome, project, services and contact sections.

Internal CSS: A <style> block in the head sets the background color, text color, fonts, spacing, borders and hover effects using element, class and pseudo-class selectors, giving the site a consistent green and gold theme.

Procedure:

1. Select the application theme: an Interior Design Studio website named "Zen Spaces".

2. Create a project folder with home.html, an images folder (interior-1.jpg to interior-4.jpg) and a pages folder (gallery.html, about-us.html, contact.html, projects.html) in VS Code.

3. Begin home.html with the <!DOCTYPE html> declaration and add the <html>, <head> (with <meta charset> and <title>) and <body> tags.

4. Add an HTML comment with the register number and website theme at the top of the file.

5. Write internal CSS inside <style> to apply the background color, text color, fonts, borders, table and list styles.

6. Create the navigation with an <h1> heading and a list of internal links (#home, #projects) and page links (gallery, about us, contact).

7. Create the hero with <h1> and <h2> headings, a clickable image link (external link opening in a new tab using target="_blank") and a bookmark link to the Projects section.

8. Create the welcome with <h3>, <h4> and multiple <p> tags, and add an external GitHub hyperlink.

9. Create the projects containing a table with a header row and three project rows, each with an image.

10. Create the services with a description list (<dl>), an ordered nested list (<ol>) and an unordered nested list (<ul>).

11. Create the contact with an email link (mailto:) and a phone link (tel:).

12. Add an HTML comment before each module/section and keep the code properly indented.

13. Create the remaining pages (gallery, about us, contact, projects) with the same navigation bar.

14. Save the files, run a local server (localhost) and open the pages in a browser to verify the output.

15. Push the code to GitHub and host it using GitHub Pages to obtain the deployment link.

Program

home.html

```
<!DOCTYPE html>
<!--URK24CS1040-->

```

```
    <div>
        <p>“Made for you” may be an accurate phrase to express what we do in interiors. We
have been designing and executing exquisite home interiors since 2004. Custom-made interior
is the best way to ensure that modular kitchen, wardrobes and other furniture perfectly
fits to the spaces. Our interior designers possess impeccable ability to understand
client’s requirements and provide the best space planning for a house or flat. D’LIFE’s
fully equipped modular kitchen is distinct with its unique design and most modern features.
We plan and make contemporary style furniture for bedrooms, living and dining rooms as
well. Innovative ideas, creative designs and ability to deliver the promises on time
enables us to retain the leadership in this field.</p>

Projects

Here are some of our featured interior design projects.

Project Image	Project Name	Room Type	Style
	Urban Elegance	Living Room	Modern
	Serene Retreat	Bedroom	Minimalist
	Golden Feast	Dining Room	Contemporary

Our Services and Design Process

Zen Spaces offers complete interior design solutions for modern homes and apartments.

Modular Kitchen
Smart kitchen layouts with modern cabinets, storage units, and elegant finishes.

Bedroom Interiors
Comfortable and stylish bedroom designs with wardrobes, lighting, and custom furniture.

Living Room Design
Beautiful living spaces designed for comfort, family interaction, and visual appeal.

1. Design Consultation
    1. Understand client requirements
    2. Discuss budget and space planning
2. Concept Development
    1. Create layout ideas
    2. Select materials and colors
3. Execution
    1. Install furniture and decor
    2. Complete final finishing

Result

The given HTML5 web page for the Interior Design Studio theme was successfully designed and executed using appropriate tags, formatting elements, hyperlinks, tables, lists, comments and internal CSS. The output matched the expected layout and content criteria and was verified on localhost and hosted on GitHub Pages.
